Subject: FW: CFAC SAP comments

Below are Brian Sanchez' comments and Attached are David Berry's.

Please invite them to the call next week.

Mike

Section 4.1, last sentence of 2nd paragraph: "...WP and BERA WP, the sampling design proposed for the Phase II Site Characterization includes a minimum of 8 to 10 observations (and most of the time more than 10) for each matrix evaluated in the exposure analysis." What are considered as the 8-10 "observations"? Is this 8-10 analytical values for each compound for each matrix at each site? 8-10 samples per exposure unit? Some clarification here would help.

Table 5: Total TAL Metals are included here, but not Dissolved TAL Metals. The inclusion of dissolved metals is referred to in Table 1 and in the text. Suggest including it in Table 5 as well.

Table 10: I don't believe that we will use groundwater data to evaluate ecological risk. This table may not be necessary.
